79 / 100 Speed

Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 3 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Optimize CSS Delivery](#) of the following:

- <http://fonts.googleapis.com/css?family=Roboto:400,300>
- <http://soramarket.mihanstore.net/data/styles/style.css>
- <http://soramarket.mihanstore.net/data/styles/l1.css>

Mobile

Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- <http://www.google.com/recaptcha/api/js/recaptcha.js> (50 minutes)

Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 2.2KiB (44% reduction).

- Compressing <http://soramarket.mihanstore.net/data/img/flags.png> could save 2.2KiB (44% reduction).

7 Passed Rules

Avoid landing page redirects

Your page has no redirects. Learn more about [avoiding landing page redirects](#).

Enable compression

You have compression enabled. Learn more about [enabling compression](#).

Reduce server response time

Minify HTML

Your HTML is minified. Learn more about [minifying HTML](#).

Minify JavaScript

Your JavaScript content is minified. Learn more about [minifying JavaScript](#).

Prioritize visible content

You have the above-the-fold content properly prioritized. Learn more about [prioritizing visible content](#).

71 / 100 User Experience

Should Fix:

Configure the viewport

Your page does not have a viewport specified. This causes mobile devices to render your page as it would appear on a desktop browser, scaling it down to fit on a mobile screen. Configure a viewport to allow your page to render properly on all devices.

[Mobile](#)

[Configure a viewport](#) for this page.

Use legible font sizes

The following text on your page renders in a way that may be difficult for some of your visitors to read. [Use legible font sizes](#) to provide a better user experience.

The following text fragments have a small font size. Increase the font size to make them more legible.

- English renders only 5 pixels tall (12 CSS pixels) final.
- As a Registran...ation process. renders only 5 pixels tall (14 CSS pixels) final.
- Enter the text...I sent to you. renders only 5 pixels tall (13 CSS pixels) final.
- (Letters are n...se sensitive.) renders only 5 pixels tall (13 CSS pixels) final.
- Privacy & Terms renders only 6 pixels tall (16 CSS pixels) final.
- Resend Verification Email renders only 6 pixels tall (16 CSS pixels) final.

Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `` and 2 others are close to other tap targets final.
- The tap target `<input id="recaptcha_response_field" type="text" name="recaptcha_response_field">` is close to 1 other tap targets final.
